

Drying vents for tanks and vacuum systems

-FARGON drying vents FRS line are designed in order to keep special environments dry and dehumidify special such as liquid storage tanks and vacuum systems.

Supplied in several sizes and fittings (threaded or flanged) allow easy access for maintenance of the drying medium (white or blue silica gel, activated alumina or molecular sieve)

Several configurations of housings (aluminum, carbon steel, stainless steel or sintered porous material), complement each configuration to its versatility.

-FARGON^{*} also develops:

- Special systems for regeneration of the drying (integrated or separated)
- Special design of drying vents and automation for continuous operation
